

Dear Customer,

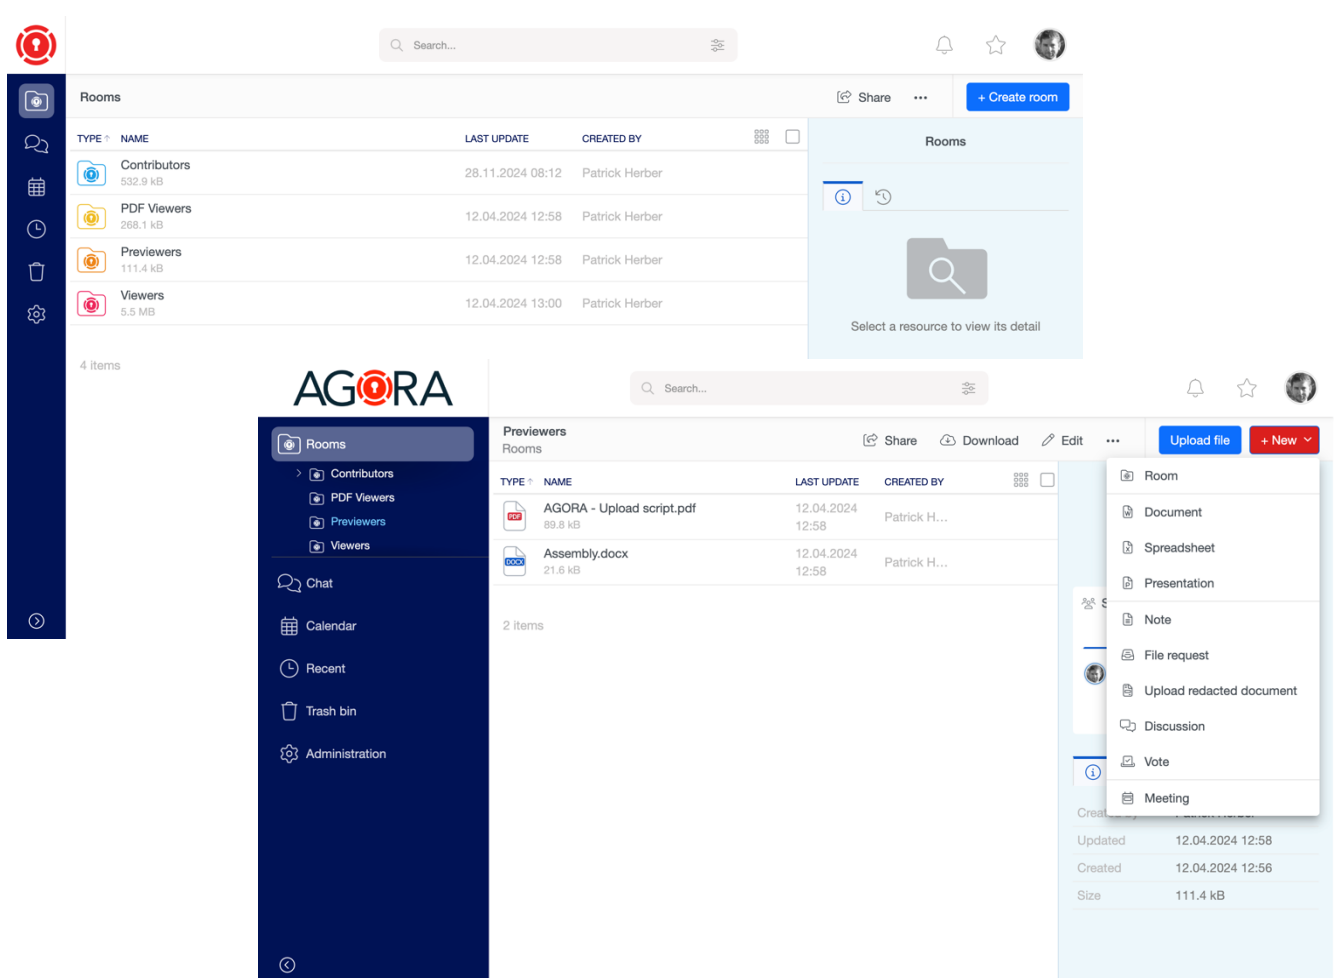

At AGORA SecureWare, we're constantly trying our best to provide you with a leading application that responds to your specific needs. For this reason, we always highly value your feedback, so please keep the input coming on feature requests, etc.

In the last few days, we deployed an update to our platform, which includes several minor bug fixes and improvements.

## Updated user interface, simplified user experience

### New icon-set and layout adjustments

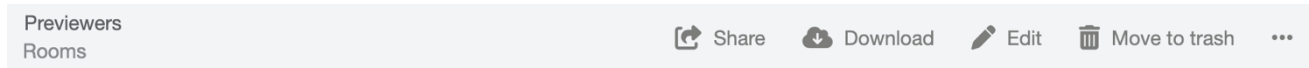

We introduced a new thinner, outlined and consistent icon-set for functions, actions and file/resource's types and performed a layout clean-up, giving the right proportions, spacing and alignments to the different UI components (header, navigation, toolbar, sidebar, content).

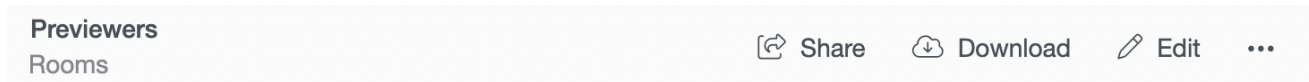

### More sharpness

We added sharpness and contrast to different layout's elements to improve readability and discovery, for example for the actions in the toolbar.

Old:

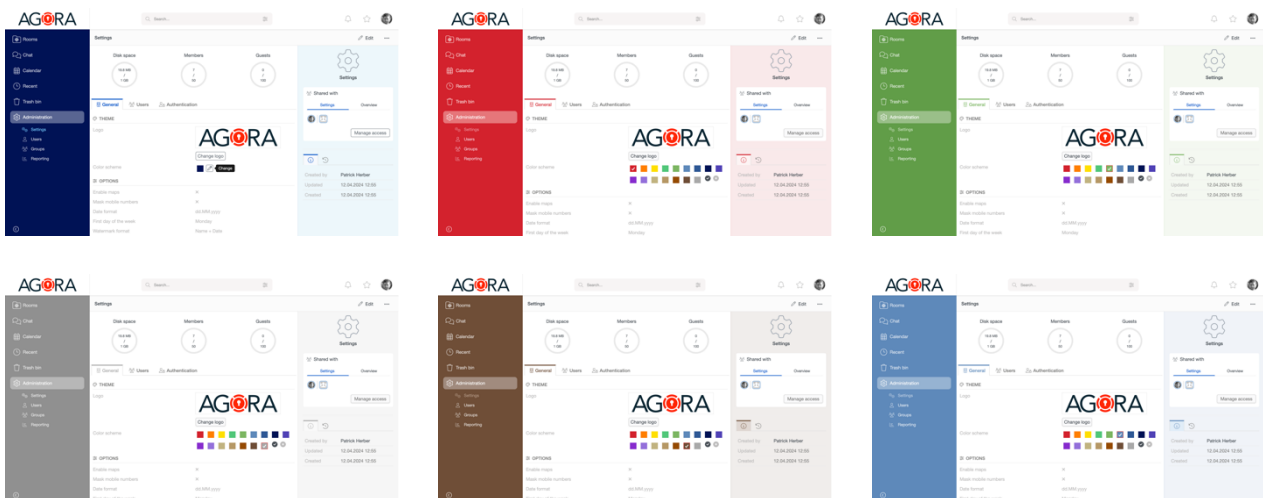

New:

### Color themes

You can simply adapt the colors of the user interface to match your preferences and branding on the Administration > Settings page.

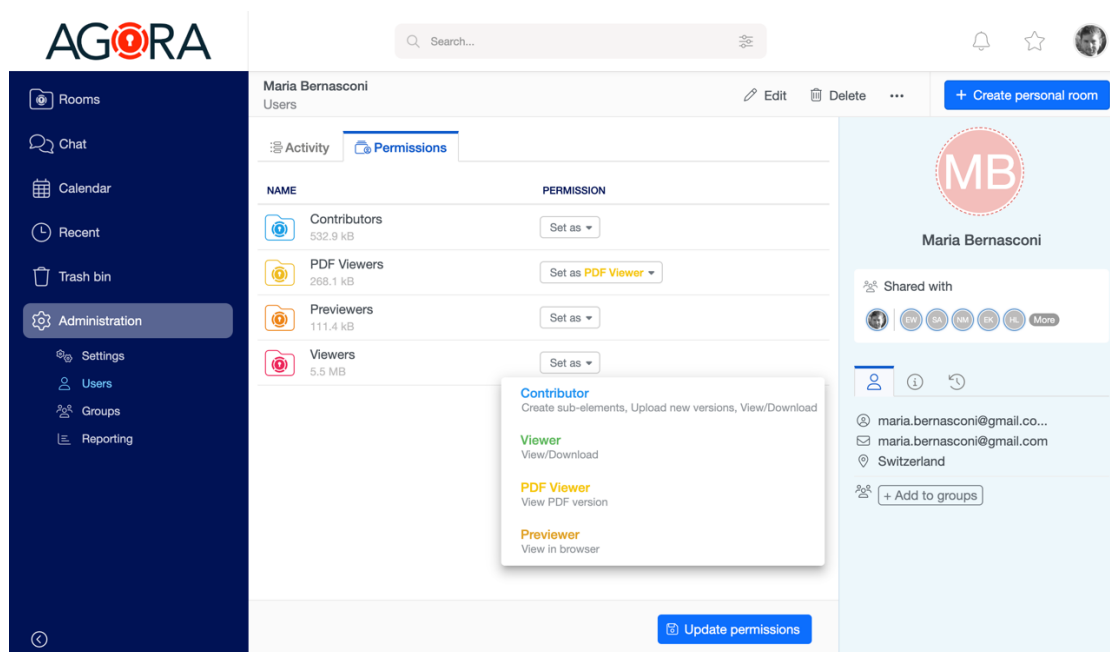

Can't you find a suitable theme? No worry, just contact us and we will create one for you.

### Change member to guest

We know that requirements change over the time. For example, you onboarded users as guest and now you need to grant them additional capabilities that only members can perform (like changing permissions or inviting new guests). For this, you have now the possibility to directly change the typology of a user from guest to member, and, of course, vice versa.

## User permissions

Probably one of the more difficult tasks for a Trust Room manager is the onboarding of new users. This implies the assignment of the needed permissions on the different resources. This can be partially solved by assigning the user to groups that are already enabled to access the required resources. As an additional help, we added a new "Permissions" tab to the user page, which gives you the ability to enable the user to access the various rooms and their content. Obviously, this does not aim to solve all cases, where a more granular control is required.

Please get in touch with us whenever you would like assistance or more information.

Enjoy secure collaboration on our platform.

Best regards,

**AGORA SecureWare**
